

# DOOR WITH LAMINATE COVERING

Blind leaf door with laminate covering, constituted by:

- Frame mm. 15/10 in "Z" profilated steel, welded, spaces for insertion of intumescent strip, prearranged with steel strips for mounting on wall angles or holes for fixing on concrete.
- Leaf in sandwich of steel mm. 9/ 10, welded. Laminate covering in different colours, finishing profiles on the perimeter of the leaf.
- Frame and finishing profiles with primer colour RAL 8019 or similar to the laminate covering.
- High density insulating package inside, protected in lock zone with two layers of calcium sulphite based material.
- Hinges in sinterized steel sliding on two steel roller bearings, oversized for intensive usage in condition of heavy loads. Their construction allows the adjusting of the leaf position in every moment by means of special screws, normally hidden by plastic cups.

- Self closing mechanism by means of springs in the hinges, adjustable and invisible outside.
- Fixed rostrum placed between the hinges.
- Lock type "Patent" with cylinder and three keys.
- PVC black handle with inside steel armour, "U" shaped for accidental grips.

**ATTENTION:**

- Consider only special size doors.
- No window glazing inside.
- In accordance to UNI EN 1634, the laminate covering can be applied on REI 60 and REI 120 doors.
